

# AIA SPOKANE LUNCH and LEARN PROGRAM

## Design Solutions for Multi-Family Projects

### Learning Objectives:

- Review the materials, product types, and design options commonly used in multi-family projects.
- Compare the design and performance criteria used by architects when researching, designing, and specifying windows and doors for multi-family and mixed use projects.
- Investigate the design considerations for the use of windows and doors in different opening types in multi-family buildings, including punched openings, large combinations, entrances, storefront, and curtain wall applications.
- Specify and design appropriate window installation details for new construction and renovation projects that meet human safety and welfare requirements while contributing to an energy efficient building envelope.
